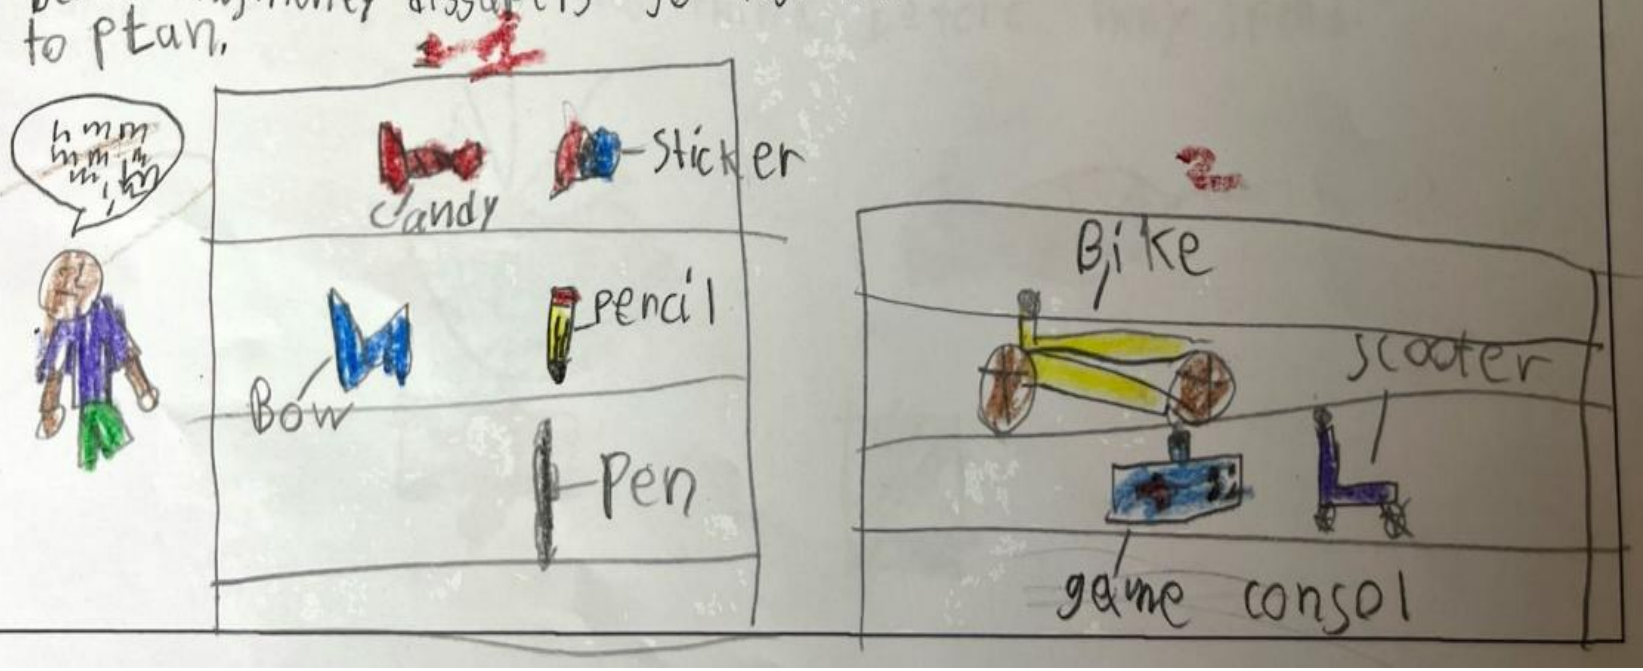
Who are you trying to help?

I am trying to help kids like me who are Learning how to use Money. Many kids get allowance, gifts, or Money for chores, But they Don't always know how to track it, save it, or make good choices.

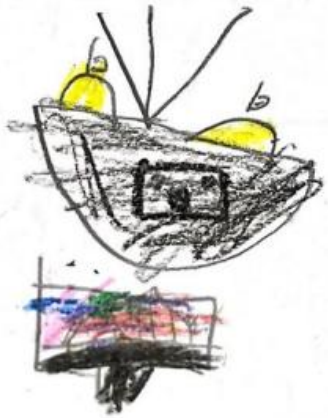
What problem are they having?

Kids often spen Money too quickly.
They Don't now the difference between an need and a want because They Don't understand how saving on investing helps in the future because this, money dissapers so fast and kids don't Learn how to plan.



What is your idea?

My idea is a simple app for kids that tracks money earned from chores, work, or gifts that helps decide wether something is a need or a want. that shows how many can be saved or invested for the future. the app helps kids think before they spend.



How will your idea work?

Kids enter how they earn Money and see their total Balance, when they want to Buy something, the app asks them to Label it as a need or a want and it will show how much it cost. Kids can choose to save it or invest some money and see how it grows over time. This helps kids learn risponsibility, Patience, and smart decision-making.
